GRINDING WITH FRIENDS

Using Compatible Grinders with Your Power Tower

To convert your Power Tower to be used with compatible grinders, you'll first need to replace the shorter Royal Drive Shaft with the Extended Drive Shaft.

Simply follow the steps in "We Love Getting Attached" in the Instruction Manual and add the extended drive shaft to the Power Tower.

Before adding a compatible grinder to your Power Tower, first add the Silicone Wrap around the grinder, if needed, by stretching over the top and positioning in the center of the grinder body, where the Cradle Arms clamp together.

Then attach your compatible grinder by following the steps in the Manual.
